

VIDIOM SYSTEMS CORPORATION OPENS TRAINING CENTER IN COLORADO

Broomfield, CO – August 30, 2005 – Vidiom Systems Corporation, a leading provider of technology solutions to the cable and consumer electronics industries, today announced the opening of its new Training Center at the company's headquarters in Broomfield, Colorado. The training center will be used to host instructor-led courses specifically designed to educate cable operators, CE manufacturers, and iTV technology providers on open standards like OCAP™, interactive application development, and Java application development for embedded systems.

To create a hands-on, application development and integration environment, the training center has been outfitted with interactive workstations. Each workstation provides access to application development tools, set-top boxes, and connectivity to multiple headends. Vidiom will be offering a full schedule of OCAP courses at the training center including its ***OCAP API Essentials*** course, and its new ***OCAP Application Developer's Workshop*** scheduled for October 2005.

"We started giving our first courses a year ago in area conference centers and the response has been overwhelming", said Walden Miller, Vice President of Engineering Services. "I am very pleased to say that we have a state-of-the-art home for our expanded training program."

Vidiom's **OCAP API Essentials** course will be the first course offered in the new training center on September 13-15. OCAP API Essentials is the cable industry's only 3-Day technical examination of OCAP middleware, applications, OpenCable™ Host Devices, and network requirements. Starting in October 2005, Vidiom will offer its **OCAP Application Developers Workshop**. This 5-day, computer-based, hands-on course will instruct students on how to build and run OCAP applications using today's tools, set-top boxes, and headend infrastructure. Later this year, Vidiom will be offering Java courses tailored to the cable industry and embedded systems as well as other specialized OCAP courses.

About Vidiom Systems Corporation

Vidiom Systems Corporation provides software solutions to cable operators, content and technology providers, and consumer electronics manufacturers. Specializing in the design and development of middleware, iTV applications, and tools, as well as services including software engineering, technical documentation, testing, and training, Vidiom's staff has the experience to develop the innovative system solutions our clients require. Founded in 1997 and headquartered in Broomfield, Colorado, Vidiom Systems has additional engineering offices in Portland, Oregon, and Des Moines, Iowa. For more information about our products and professional services please visit our website at www.vidiom.com.
