

The best technical products are supported by quality documentation. Great online help and printed documentation can make the difference between a product's success or failure.

Vidiom Systems gives you a competitive edge by creating intuitive, clear and professional documentation that delivers solid business value. From working with engineers, installing and using the software, and reading the source code, to designing, writing, managing and printing, we cover all your documentation needs.

Vidiom Technical Documentation Services

Vidiom's award-winning team of technical writers can deliver the technical documentation your organization and customers need. The technical writers at Vidiom specialize in managing multi-volume documentation sets and online help systems that support complex software systems.

Vidiom's experienced staff of writers and editors can also function as usability experts to ensure every document is consistent and easy to use. Our materials have helped launch and support software, hardware, international standards and more.

Vidiom delivers the professional technical documentation your customers deserve.

Documentation for Programmers

Vidiom writers excel at writing API documents, programmer guides, user guides, hardware porting guides, software and application developer's kits, and more. Our writers understand C, C++ and Java code, as well as how to design and write software. This expertise translates into writing very accessible, but extremely technical documents written at the level required by programmers.

In addition, Vidiom writers have experience writing functional requirements, design specifications and software architecture specifications. With Vidiom writers working on these internal documents, your engineers will have more time to do what they do best.

Online Help

Our writers can help you design your own online help style. Or, we can use your existing online help style. Either way, Vidiom writers can create online help that your customers will value and enjoy using.

End-User Manuals

Vidiom writers have written a range of end-user manuals, including user guides for development tools and applications, quick start guides, systems integration setup guides and tutorials. Our guides are written with a focus on process and the needs of the end users.

Vidiom writers have helped groups focus on their audiences by participating in testing at the prototype and beta level. This vigilant awareness of audience directly translates into excellence in our end-user manuals.

Standards and Specifications

Our writers have participated in writing world-wide standard specifications from CD-i to Cable technology. We have experience writing requests for proposals (RFPs), requests for information (RFIs) as well as requirement, design and functional specifications and white papers. We can develop documentation specific to your company or to be used by an entire industry.
